OTHER DEVICES for Different USE CASES			
NOTES:	Purge Virus provides many more fixtures for uses ranging from surface sterilization to custom coil disinfection. In most cases the modular design is tailored to the HVAC equipment. Please contact us at Info@PurgeVirus.com and provide key information such as Coil and Plenum dimensions, CFM, and available distance from the Coil to the first air turn. We will provide our recommendations and pricing, accordingly.		

**EXAMPLE of USE CASE that is an alternative to the DC series:
In Duct + Coil Cleaning (or combination) subject to distance from Coil**

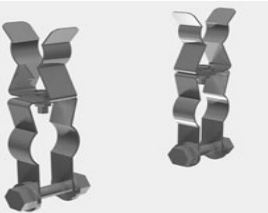

NOTES:

1: PV-AUV-CK series are not fixtures but devices that are assembled with a "kit of parts" on-site. These are ideal for plenums that are over 90" in width where (2) of the DC fixtures do not adequately cover the distance for the required dosage. The CK series is also ideal for plenums where the installation does not provide access to the outside of the AHU. This is sometimes the case when the AHU is situated against a wall.

2: The pricing does not include 3/4" conduit, which is the preferred mounting equipment for the Lamp Holders (Clips). The conduit is readily available by installers at local levels and is cut to the size of the plenum perpendicular to the lamps.
